Disclaimer

Disclaimer:

Individual results may vary. Modding blasters is a hobby of ours, and in no way do we claim to be experts on the subject. We've written this manual for other enthusiasts who want to accomplish what we have with our blasters. However, due to legal reasons, we're unable to guarantee any results and the content in this manual should not be considered professional advice.

The use of this information and recommended products should be based on your own due diligence. You agree not to hold the authors and/or distributors of this manual liable for any success or failure of your endeavors that are directly or indirectly related to the purchase and use of our information, recommended products and services.

Make sure you have good knowledge on electric circuit and modding skill. Please read below instruction carefully and reference to online video on installing instruction.

INSTALLATION STEPS

Supplies Needed:

- Small Phillips Head Screwdriver
- Small Flat Head Screwdriver

Step 1:

Remove the barrel extension from the blaster unit. Remove the 6 screws (as shown in diagram) on the barrel extension.

Step 2:

Open the barrel extension and take out the tube.

**Step 3:**

This step is critical. Remove the muzzle from the barrel extension. Use a sharp cutter to cut out the extended part of the muzzle (as shown in diagram) and use fine grid sandpaper to sand the edges. Cutting out the extended part of the muzzle will allow the tube to extend beyond the muzzle.

Step 4:

After the cut out is completed. Insert the new tube back into the barrel extension to your own desired length and cut off the excessive length. Use fine grid sandpaper to sand the edges.
